current_position_summary	Backend Engineer at Fluid Truck for Industry None for 4 years 4 months. Fluid Truck description: Design, develop, and maintain microservices architecture using Go (Golang) and PostgreSQL, leveraging Protobuf for efficient inter-service communication; contribute to debugging, feature development, and performance optimization to ensure system reliability and scalability. Designed and implemented a robust billing system, streamlining payment processing, reducing errors, and improving overall efficiency for company operations. Developed and deployed a geofencing solution enabling customers to monitor vehicle locations in real time, with a custom notification system for alerts on boundary breaches and other user-defined triggers. Collaborated with other engineers to implement customer subscri
	ptions platform, using Stripe's API. Implemented a data synchronization solution between PostgreSQL and Elasticsearch, enabling advanced search and filtering capabilities that significantly enhanced user experience and data accessibility. In total at Fluid Truck for 4 years 4 months.
