| current_position_summary | Backend Developer & Cloud Infrastructure at Sologenic for Industry None for 2 years 1 months. Sologenic description: - Architected and deployed scalable backend microservices using a model-store-service pattern and event-driven design with Google Cloud Pub/Sub. - Developed a custom deployment automation tool (similar to Terraform) to manage CI/CD workflows, reducing deployment time by over 70%. - Designed and launched the company's first ETL pipeline integrating MySQL, Google Analytics, and Datastore; transformed data into BigQuery KPIs and visualized with Looker Studio, doubling reporting efficiency. - Led company-wide database migrations from MySQL to Google Datastore, including data cleanup and service refactoring; reduced query latency and cut operational costs by 30%. - Optimized N |
| | FT storage by restructuring databases and deduplicating assets, lowering storage costs by 80%. - Built blockchain-integrated services for XRPL, Coreum, and Cosmos to support cross-chain asset transactions. - Led backend development for a trading platform under the ATG initiative, collaborating with a regulated financial partner to define trading rules and deliver compliant microservices. - Developed backend services and a React-based internal admin dashboard to manage assets, users, and KYC workflows; integrated third-party services including SendGrid, KYC, and market data APIs. In total at Sologenic for 2 years 1 months. |
